

## Protein-Carbohydrate Interfaces. PDB depositions: August\_2024

### Description

DIONYSUS is a database of protein-carbohydrate interfaces annotated according to proteins and carbohydratesâ?? structural, chemical and functional properties .

<https://www.dsimb.inserm.fr/DIONYSUS>. It collects and analyzes protein-carbohydrate complexes of various types, including non-covalent ligand binding, glycosylated proteins, glycopeptides, and reaction intermediates in sugar enzymes. The update of DIONYSUS offers the possibility of creating a regular list of the latest structures added to the PDB, including PDB ID, title, protein function, and type of carbohydrate. Listed below are the latest structures added in **August 2024**

PdB: 8QY1

PdB: 8QY1
