

Conformational Wheel 5 Membered Ring

Description

Five Membered-ring 3D Structures around the Conformational Wheel
The structures are described as a function of the phase angles (going from 0Ã?Â° to 360Ã?Â° by 18Ã?Â° increment), for an amplitude of 35, and are numbered from wheel.0 to wheel 19.

The coordinate files (pdb format) are downloadable. Each template offers the possibility to generate ut generating the proper substituents at the corresponding axial and atom.
